The inventions set forth in claims 1, 2, 6 and 7 do not involve an inventive step in the light of document 1 cited in the international search report. Document 1 does not indicate that electroplating is deposited in a via hole so as to cover a core material, but it is well known that if electroless plating fluid impregnates an insulating sheet it has an adverse impact, therefore it would be easy for a person skilled in the art to conceive of applying said feature.

The inventions set forth in claims 3, 5 and 8 to 10 do not involve an inventive step in the light of documents 1 and 2 cited in the international search report. Document 1 does not disclose the technical means of an anchor structure, but it would be easy for a person skilled in the art to conceive of applying the anchor structure set forth in document 2.
